

## Project Checkpoint 01

Weight (2%)

Students in the course “Mobile Application Development with Kotlin” needs to develop a team project. Each team can have at most two members. The following descriptions need to be added in each team’s checkpoint 01 submission

1. Team Name: Each team should have a name. The name needs to be selected by the team members
2. Team Members: Each team should list the names of the member with their Student ID and email address
3. Github: Each team needs to create a Github repository with their team name. And each team member should have a branch in their Github repository
4. Project Description: Each team needs to discuss their project plan, the features (or activities) they are planning to implement in their project and the potential users/vendors. E.g. A restaurant order taking application users should be owner of the restaurant, visitors (customers) and vendors are the produce suppliers. Each team needs to explain it carefully so that their teacher can understand the project idea properly.
5. Plan: Each team needs to give their plan, like what they are going to implement in rest of the weeks to develop their project. Each team needs to say what their plan is to show during the first sprint of the project (Checkpoint 02)
6. Submission: Each team should upload their checkpoint 01 document in the Github and should share the link in their respective Omnivox LEA section.
